

Building Security

100 Redwood Shores Parkway has a state of the art building security system featuring:

- Aiphone MKS -1GD Fixed Camera Door Sentry System
- Access Control by Northern Computers using WIN-PAK 2.0 Access Control Software

In addition, there is an Intrusion Alarm system that can be programmed to interface with the Access Control to eliminate the need to manually arm and disarm the intrusion system each day. The Intrusion Alarm system can be programmed to arm different floors or areas so one can be armed and others can be unarmed, depending of the security needs of the various offices, suites or floors inside the building.

From the front reception desk, there are Audio/Video call boxes that can be unlocked to give access to a visitor or delivery person. There are also several cameras connected to a recorder at the front lobby reception desk for additional security.

There are also stand-alone card readers, which are not tied into the access control system that limit access to those doors. They can be moved, as can the electronic locking door hardware, to different doors within the building, or be tied in with the Access Control system administered from the computer in the security room. Currently, they are not tied in and must be programmed individually at each reader.

All the systems can be changed reconfigured or added to depending of the needs and concerns of the new tenant or tenants.
